Mission Report (Michael Studinger, Mission Scientist)

Today's mission reoccupied the centerlines of the Zacharaie, 79°N, Storstrommen and L Bistrup glaciers. We also collected data over a pair of PROMICE sites immediately north of 79°N Glacier. We transit to and from the northeast region along historical ATM lines dating back to 1994.

LiDAR data collection started 04/29/2014 11:05 UTC and ended at 18:39 UTC. In total we collected 7.6 hours of science data. We encountered 20 minutes of low clouds around Thule on the outbound and inbound legs to Camp Century that also prevented us from doing a ramp pass. Other than that the weather was perfect all day.
