

HU-25C Guardian 09/30/15

Aircraft: [HU-25A Guardian - LaRC #525](#) (See full schedule)

Flight Number: OIB2015 Arctic North Central Gap 01

Payload Configuration: ATM & DMS

Nav Data Collected: No

Total Flight Time: 3.9 hours

Submitted by: Luci Crittenden on 09/30/15

Flight Segments:

From:	BGTL	To:	BGTL
Start:	09/30/15 11:25 Z	Finish:	09/30/15 15:17 Z
Flight Time:	3.9 hours		
Log Number:	15F005	PI:	John Woods
Funding Source:	Thomas Wagner - NASA - SMD - ESD Cryospheric Science		
Purpose of Flight:	Science		
Comments:	OIB completed the North Central Gap 01 mission out of Thule today. The aircraft has turned and is currently on it's second mission for today. Weather at Thule is expected to get worse later this afternoon. Weather forecast late this evening/early am tomorrow will determine if we are able to fly another data flight tomorrow.		

Flight Hour Summary:

	15F005	16F002
Flight Hours Approved in SOFRS	100	
Flight Hours Previously Approved		67.4
Total Used	32.6	65.3
Total Remaining		2.1

OIB - HU-25C Guardian 09/30/15 Science Report

Mission: OIB

Mission Summary:

Mission: Falcon North-Central Gap 01 (priority: high)

This mission is a shortened version of the Spring 2015 mission of the same name. The primary difference is that we reduced the number of grid lines crossing the upper Zachariae and 79N Glaciers from six to two.

Weather today was quite poor again, with northwestern Greenland completely obscured by clouds associated with a low-pressure system which came ashore overnight from Baffin Bay. A more powerful low-pressure system is forecast to approach the area during the day today and overnight, and it is likely that this system will close the Thule airport for at least portions of the next two days. Thus today may be our last flight opportunity until Monday. Fortunately, strong offshore flow and clear skies prevailed over much of northeast Greenland, so we selected this high-priority flight for this morning.

All instruments performed well today. The cloudiness across northwestern Greenland prevented our instruments from collecting more than isolated data between Thule and the main ridgeline of the ice sheet, but we successfully collected data for all but a small portion of the eastern half of the flightline. An isolated patch of cirrus cloud partially obscured our north-south grid lines over the upper Zachariae and 79N Glaciers, but we were able to obtain permission from controllers to descend to 31,000', which placed us beneath the cirrus, and thus we lost only a small southern portion of the western grid line to this diabolically-located cloud. We flew the outbound transit at 35,000' MSL, and the inbound leg at 38,000' MSL, and observed good performance from all sensors at all three altitudes, when clear skies were underneath.

We conducted a ramp pass at 2000' MSL.

Data volumes:

DMS: 15.0 Gb

Narrow Swath ATM: 26 Gb

FLIR: 1.5 Gb

total data collection time: 3.6 hrs
