## OIB - P-3 Orion 03/23/17 Science Report

**Mission:** OIB

**Mission Summary:**

IceBridge completed the Zig Zag West mission which is a near-repeat of an OIB flight first flown in 2010 intended to sample the thick multi-year ice near the Ellesmere coast as well as the gradient to thinner ice closer to the pole. The mission was modified to pass under a CryoSat-2 orbit in coordination with up to three other aircraft: 1) The NASA G-III carrying the GLISTIN instrument. 2) The AWI Polar 5 with the PanArcMip project. 3) A Norlandair Twin Otter as part of ESA's CryoVEx project. IceBridge launched first in order to comply with the closing time of the Thule airport. The flight was flown at an altitude of 2000 feet throughout for flight safety reasons, however this restricted the bandwidth of the snow radar to 2-8 GHz due to the current set-up on the P-3. The NASA G-III was spotted on the Airborne Science Flight tracker and first passed us overhead at 1603Z, making several passes over us throughout the CryoSat-2 line due to their higher airspeed. However, upon landing we learned that the Polar 5 and Twin Otter were unable to launch due to poor weather at Alert. Lastly, we collected data over frozen lakes in coordination with a Naval Academy survey of snow and ice thickness there.

The weather forecast showed mostly clear skies over the target area with an area of clouds at the northern end of the line. This held true throughout our flight, though the clouds along the northern section were a thin haze layer that we were able to range through without incident. All instruments performed well making for a successful flight with no loss of data.
