Mission:

OIB

Mission Summary:

OIB completed the baseline priority Zachariae/79N mission. This mission reoccupies the centerlines of the Zachariae and 79N glaciers, plus a grid of six ascending ICESat-1 tracks similar to one originally flown by OIB in 2012, but moved upstream by two ICESat-1 groundtracks to account for the breakup of the lower ice shelf. We also overflow a pair of PROMICE sites immediately north of 79N Glacier, point KPCL was overflowed at 16:11:59Z and point KPCU at 16:15:05:Z. The transit to and from the northeast region was along a historical ATM line dating back to 1994. For 2017 this mission was configured as a transit flight between Thule and Longyearbyen, and as such it also contained a sea ice survey across the Fram Strait, including overflights of four underwater moorings with upward-looking sonar (ULS) sensors. These moorings are known as F11, F12, F13, and F14. Overflight times were: F11: 17:42:45Z; F12: 17:40:01Z; F13: 17:37:16Z; F14: 17:33:00Z.

The weather forecast for the mission showed clear skies which is what we experienced on flight, all instruments onboard worked well.
